ARCHITECTURE FOR THE CROWD BY THE CROWD

Hi Harvard innovation lab

SUREOHP #VWDWHP HQW

89% of 15M projects in the US - worth $171B - are done without design input, because designers are:

- **Unapproachable**
- **Hard to find**
- **Limited locally**
- **Expensive**
- **Single Design**

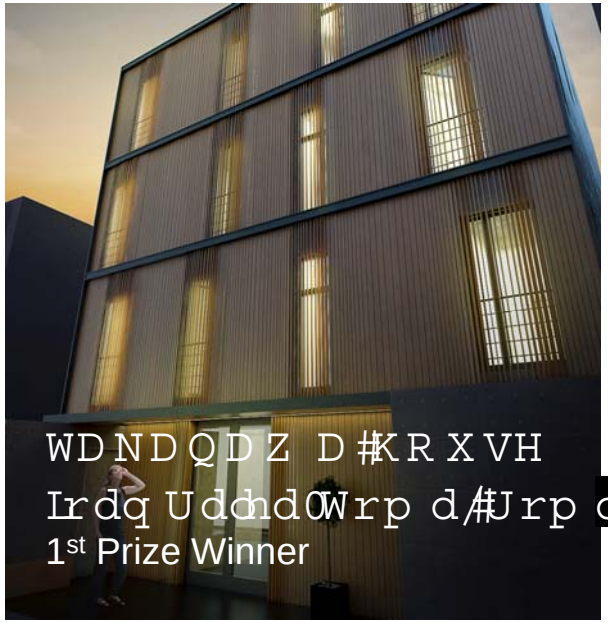
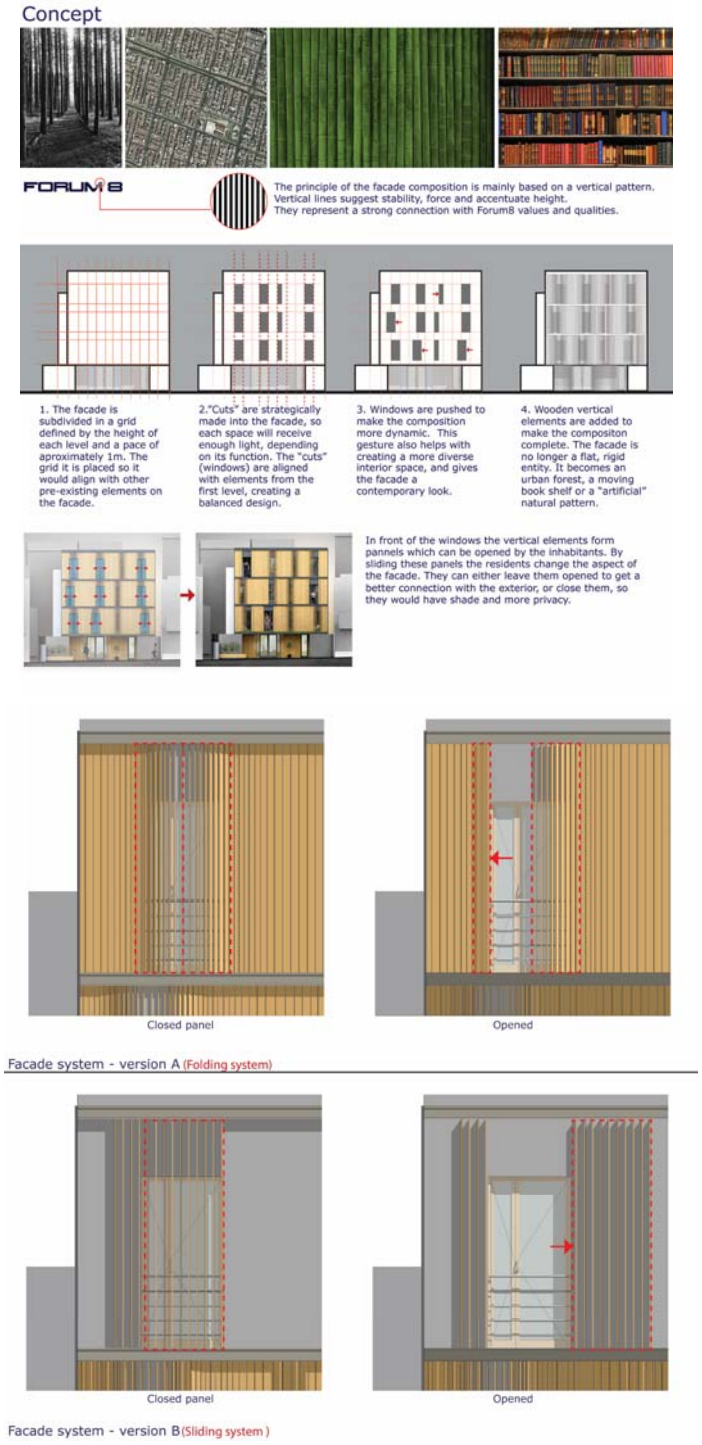
Elevation - version A (night)



WDNDQDZ D#KRXVH
Irdq Uddnd0Wrp d/#Jrp dqld
1st Prize Winner



Concept
FORUM 8
The principle of the facade composition is mainly based on a vertical pattern.
Vertical lines suggest stability, force and accentuate height.
They represent a strong connection with Forum8 values and qualities.
1. The facade is subdivided in a grid defined by the height of each level and a pace of aproximately 1m. The grid it is placed so it would align with other pre-existing elements on the facade.
2."Cuts" are strategically made into the facade, so each space will receive enough light, depending on its function. The "cuts" (windows) are aligned with elements from the first level, creating a balanced design.
3. Windows are pushed to make the composition more dynamic. This gesture also helps with creating a more diverse interior space, and gives the facade a contemporary look.
4. Wooden vertical elements are added to make the compositon complete. The facade is no longer a flat, rigid entity. It becomes an urban forest, a moving book shelf or a "artificial" natural pattern.
In front of the windows the vertical elements form pannels which can be opened by the inhabitants. By sliding these panels the residents change the aspect of the facade. They can either leave them opened to get a better connection with the exterior, or close them, so they would have shade and more privacy.
